

ClipMind AI — 7-Person Team Presentation Plan (Simple Words)

Easy-to-Speak Presentation Guide for 7 Team Members

Project Name: ClipMind AI — Video Summarization & Key Moments Platform **Internship:** Infosys Springboard AI & Full-Stack Cloud Internship **Total Slides:** 10 Slides (in [ClipMind_AI_Final_Presentation.pptx](#)) **Total Time:** 10 to 12 Minutes (~1.5 minutes per person) **Tone:** Simple, clear, confident, and professional English. No confusing jargon.

Quick Summary Table (Who Speaks What)

Speaker	Name (Fill in)	Slides	Topic in Simple Words	Time
Speaker 1	_____	Slide 1 & 2	Introduction, the problem with videos, and our solution	1.5 Mins
Speaker 2	_____	Slide 3	The 6 main features and innovations of ClipMind AI	1.5 Mins
Speaker 3	_____	Slide 4	How the system is built (the 5 layers)	1.5 Mins
Speaker 4	_____	Slide 5 & 6	How a video gets processed (the 7-stage pipeline)	2.0 Mins
Speaker 5	_____	Slide 7	How we built it over 8 weeks (Milestones 1 to 4)	1.5 Mins
Speaker 6	_____	Slide 8	Who uses it (4 user roles) and the Teacher Studio	1.5 Mins
Speaker 7	_____	Slide 9 & 10	Test results, accuracy, tech stack, and conclusion	1.5 Mins

Detailed Speaking Scripts (Speaker by Speaker)

Speaker 1: Introduction & The Problem (Slides 1 & 2)

- **Slides you speak on:** Slide 1 (Title) and Slide 2 (Problems & Solutions)
- **What to point to on screen:**
 - On Slide 1: Point to the project title and the 5 badges at the bottom.
 - On Slide 2: Point to the Red box on the left (Problems) and the Green box on the right (Solutions).
- **Exact words to say:**

Verbal Narration:

"Hello everyone and respected evaluators. My name is **[Your Name]**, and on behalf of my team from **GMR Institute of Technology**, I welcome you to our presentation. Today, we are presenting our Infosys Springboard internship project: **ClipMind AI**. Nowadays, everyone learns from videos—college lectures, YouTube tutorials, and training webinars. But watching long videos has big problems: Moving to **Slide 2**, here are the 4 main problems students face every day: 1. First, **wasted time**: If you want to find a 2-minute formula in a 1-hour lecture, you have to drag the seek bar back and forth. You waste up to 80% of your study time just searching. 2. Second, **no search**: You cannot search inside video words or slides. 3. Third, **lost files**: On free cloud platforms, when a server restarts, all uploaded videos get deleted. 4. Fourth, **forgetting**: Just watching videos passively means students forget 80% of the topic within a week. To fix this, we built **ClipMind AI**! It gives you instant word search, smart summaries, auto-generated quizzes, and permanent Google Drive storage so files never get lost. I now invite **[Speaker 2 Name]** to explain our 6 key innovations."

- **Handover line:** "I now hand over to **[Speaker 2 Name]** to explain our 6 key features."

Speaker 2: The 6 Key Innovations (Slide 3)

- **Slides you speak on:** Slide 3 (Proposed Solution & Novelty)
- **What to point to on screen:**

- Point to the 6 colorful cards on Slide 3 one by one.
- **Exact words to say:**

Verbal Narration:

"Thank you, [Speaker 1 Name]. Hello everyone, I am [Your Name]. On **Slide 3**, you can see the **6 big innovations** that make ClipMind AI special: 1. First, **Zero-Loss Google Drive Storage**: We connect directly to the student's personal Google Drive. When you upload a video, it automatically backs up to your Drive. Even if the server restarts, your video is 100% safe and streams instantly. 2. Second, **Smart Cloud Fallback**: If the server disk ever resets, the system automatically pulls the video from Google Drive so AI processing never breaks. 3. Third, **Interactive Concept Mind Maps**: Instead of just reading text, students see a visual concept tree of the lecture. Clicking any topic bubble jumps the video directly to that part! 4. Fourth, **Smart Speech and Vision Engine**: We use OpenAI Whisper to turn voice into text with exact word timings, and OpenCV vision to detect slide changes. 5. Fifth, **Fast Summaries**: You get a quick summary in less than 2 seconds, plus detailed chapter notes and practice questions. 6. Sixth, **Teacher Studio**: A 5-tab workspace where teachers can edit subtitles, organize chapters, and create quiz questions easily. Now, [Speaker 3 Name] will explain how the whole system is built."

- **Handover line:** "Now, [Speaker 3 Name] will explain our 5-layer system architecture."

Speaker 3: System Architecture (Slide 4)

- **Slides you speak on:** Slide 4 (Architecture Structural Flow)
- **What to point to on screen:**
- Point from top to bottom: Layer 1 (Frontend), Layer 2 (Backend Gateway), Layer 3 (AI Engine), and the bottom two boxes (Databases and Cloud Storage).
- **Exact words to say:**

Verbal Narration:

"Thank you, [Speaker 2 Name]. I am [Your Name]. Looking at **Slide 4**, ClipMind AI is built with a clean, 5-layer architecture: - At the top is **Layer 1: The Frontend**. Built using React 19, TypeScript, and Vite. It is super fast, works smoothly on mobiles and laptops, and has both dark and light modes with zero AI-template look. - Below that is **Layer 2: The API Gateway**. Powered by Python FastAPI. It handles secure login with JWT tokens, Google Sign-in, and fast video streaming. - In the middle is **Layer 3: The AI Engine**. This is the brain. It extracts the audio using FFmpeg, converts speech to text using Whisper, creates summaries with AI models, and detects slide transitions using OpenCV. - At the bottom left is **Layer 4: The Database**. We use two databases: SQLite or PostgreSQL for secure user passwords, and MongoDB Atlas for storing video transcripts, summaries, and quizzes. - At the bottom right is **Layer 5: Cloud Storage**. We use Google Drive to give every user 15 GB of permanent free storage. I now invite [Speaker 4 Name] to show how a video travels through our pipeline."

- **Handover line:** "Next, [Speaker 4 Name] will walk you through our video processing pipeline."

Speaker 4: The 7-Stage Video Pipeline (Slides 5 & 6)

- **Slides you speak on:** Slide 5 (End-to-End Workflow) and Slide 6 (Detailed 7 Stages)
- **What to point to on screen:**
- On Slide 5: Point across the 5 columns from left to right.
- On Slide 6: Point to the stages from Stage 1 (15%) to Stage 7 (100%).
- **Exact words to say:**

Verbal Narration:

"Thank you, [Speaker 3 Name]. Hello everyone, I am [Your Name]. On **Slide 5**, you see the big picture: A user uploads a video file or pastes a YouTube link. The gateway validates it, sends it to Google Drive, runs our AI models, saves the results, and displays them on the dashboard. Now, moving to **Slide 6**, let us see the exact **7 steps** that happen automatically in the background: - In **Stage 1 (15%)**: The file is checked, saved, and backed up to Google Drive. - In **Stage 2 (35%)**: FFmpeg separates the audio and cleans it into crystal-clear 16kHz sound. - In **Stage 3 (65%)**: OpenAI Whisper listens to the audio and writes down every single spoken word with exact second-by-second timestamps. - In **Stage 4 (75%)**: The AI generates a quick summary, chapter titles, and key takeaways. - In **Stage 5 (85%)**: OpenCV scans 1 frame per second to find slide changes and captures thumbnail photos of important moments. - In **Stage 6 (90%)**: The system connects the concepts into an interactive visual Mind Map. - In **Stage 7 (100%)**: Everything is saved to MongoDB, and the video is ready for smooth streaming! The user sees a live progress bar without even refreshing the page. Now, [Speaker 5 Name] will explain how we built this project week-by-week."

- **Handover line:** "Now, [Speaker 5 Name] will present our 8-week implementation timeline."

Speaker 5: The 8-Week Timeline & Milestones (Slide 7)

- **Slides you speak on:** Slide 7 (Milestone-Wise Roadmap Weeks 1–8)
- **What to point to on screen:**
 - Point to the 4 milestone cards from left to right, pointing out the green "PASSED 100%" badges.
- **Exact words to say:**

Verbal Narration:

"Thank you, [Speaker 4 Name]. I am [Your Name]. On **Slide 7**, you can see our **8-week project journey**. We completed 100% of the Infosys Springboard requirements across 4 structured two-week milestones: - In **Milestone 1 (Weeks 1 & 2)**: We set up our project foundation—the FastAPI backend, the React frontend, secure login with encrypted passwords, video upload support, and audio extraction. - In **Milestone 2 (Weeks 3 & 4)**: We integrated the Whisper speech-to-text model, matched timestamps to every spoken word, built the fast summary engine, and created the interactive transcript viewer where clicking any text plays that video moment. - In **Milestone 3 (Weeks 5 & 6)**: We added computer vision for slide detection, built the 5-Tab Teacher Studio, created the Learner Study Room with quizzes, and added downloads for PDF, Word, and subtitle files. - In **Milestone 4 (Weeks 7 & 8)**: We added Google Drive permanent storage, built the interactive Concept Mind Map, wrapped the entire application in Docker containers, and verified that all 28 automated tests pass with 100% success. I now pass the mic to [Speaker 6 Name] to talk about the user roles and the Teacher Studio."

- **Handover line:** "I now hand over to [Speaker 6 Name] to explain user roles and the Educator Studio."

Speaker 6: User Roles & Teacher Studio (Slide 8)

- **Slides you speak on:** Slide 8 (Multi-Persona RBAC & Educator Studio)
- **What to point to on screen:**
 - Point to the 4 cards: Content Creator, Learner, Educator Studio (top 5 tabs), and Administrator.
- **Exact words to say:**

Verbal Narration:

"Thank you, [Speaker 5 Name]. Hello everyone, I am [Your Name]. On **Slide 8**, ClipMind AI provides a customized experience for **4 different types of users**: 1. First, **Content Creators**: They can upload videos, track live processing, see analytics like speaking speed, and download study notes in PDF, Word, or Subtitle formats. 2. Second, **Learners (Students)**: They get an interactive study room. As the video plays, subtitles scroll automatically. They can click any word to jump the video, take auto-graded quizzes, flip 3D study cards, and explore the concept mind map. 3. Third, **Educators (Teachers)**: Teachers get a special **5-Tab Authoring Studio**: - Tab 1 lets them edit transcripts and label who is speaking. - Tab 2 lets them organize lectures into named chapters. - Tab 3 lets them create multiple-choice quizzes with explanations. - Tab 4 lets them build flashcard decks. - Tab 5 shows a Live Student Preview so teachers can test everything before publishing! 4. Fourth, **Administrators**: Admins can manage users, check platform health, and view security audit logs. To wrap up with our test results and conclusion, I invite our final speaker, [Speaker 7 Name]."

- **Handover line:** "Now, [Speaker 7 Name] will share our test results, technology stack, and conclusion."

Speaker 7: Results, Tech Stack & Conclusion (Slides 9 & 10)

- **Slides you speak on:** **Slide 9** (Benchmarks & Telemetry) and **Slide 10** (Conclusion & Tech Stack)
- **What to point to on screen:**
 - On Slide 9: Point to the big numbers (4.18% WER, 92.4% slide precision, 2.6x speed, <20ms seek, 100% tests).
 - On Slide 10: Point to the achievements on the left and the technology stack list on the right.
- **Exact words to say:**

Verbal Narration:

"Thank you, [Speaker 6 Name]. Hello everyone, I am [Your Name]. Looking at **Slide 9**, we tested ClipMind AI thoroughly, and here are our verified results:* - **95.8% Speech Accuracy:** Our Whisper model has an error rate of only 4.18%. - **92.4% Slide Detection Accuracy:** OpenCV accurately finds visual slide transitions. - **Super Fast Processing:** The AI runs at 2.6 times real-time speed. That means a full 60-minute college lecture is processed in just 2.6 minutes! - **Instant Playback:** Video seeking takes less than 20 milliseconds, whether playing from local disk or Google Drive. - **100% Test Pass Rate:** All 28 automated tests passed successfully. *Moving to **Slide 10**, here is our complete production stack: React 19, TypeScript, Python FastAPI, SQLite, MongoDB Atlas, Google Drive API, Whisper, and Docker containerization. In conclusion, ClipMind AI turns passive, boring video lectures into active, searchable, and permanent knowledge that helps students learn faster and remember more. Thank you very much for your time and guidance. Our team is now ready to demonstrate the live platform and answer your questions!"

- **Closing line:** "Thank you! We are now open for any questions and our live demonstration."

5 Golden Rules for the Presentation

1. **Be loud, clear, and smile:** Speak at a comfortable pace. Don't rush!
2. **Always say the handover line:** Don't let awkward silence happen. Say: "I now hand over to [Name]..."
3. **Point to the screen:** When talking about a card or number, point your hand towards that part of the slide.
4. **Control the slides smoothly:** Have Speaker 1 or 4 press the Spacebar or clicker to change slides.
5. **Team support in Q&A:**
 - If asked about **Architecture or Cloud:** Speaker 3 or 2 answers.
 - If asked about **AI, Whisper, or OpenCV:** Speaker 4 answers.
 - If asked about **Weeks 1 to 8:** Speaker 5 answers.
 - If asked about **Teachers & Quizzes:** Speaker 6 answers.
 - If asked about **Accuracy & Tests:** Speaker 7 answers.
